Validated Findings

## PRODUCT CAPABILITIES

Real-time Detection

Inline runtime detection at 14.5µs P50 latency. 7 rule categories: RCE, SSRF, Credential Exfiltration, Path Traversal, Prompt Injection, Supply Chain Tampering, Data Exfiltration. 24 CCS-aligned rules.

Zero-Day Coverage

Validated across 13 providers and 33 models on 80K production traces. 6 RCE vulnerabilities discovered and disclosed: CrewAI, AutoGen Studio, Docker MCP, AG2, LlamalIndex, and Haystack.

Compliance Ready

CCS framework alignment. Automatic SOC2 / ISO27001 evidence generation. Audit-ready compliance reports for enterprise requirements.

## BOUNTY TRACK RECORD

| Vulnerability               | Product    | Type           | Program |
|-----------------------------|------------|----------------|---------|
| CrewAI MCP RCE              | CrewAI     | RCE            | MSRC    |
| AutoGen Studio RCE          | AutoGen    | RCE (CVSS 9.8) | ZDI     |
| Docker MCP Container Escape | Docker MCP | Escape         | GitHub  |
| LiteLLM SSRF                | LiteLLM    | SSRF           | GitHub  |
| AG2 Pickle RCE              | AG2        | RCE            | GitHub  |
| Haystack Pipeline RCE       | Haystack   | RCE            | GitHub  |

## DEPLOYMENT OPTIONS

| MCP Protocol                    | Python SDK              | npm Package                  | Docker                          | Cloudflare Workers      | Render.com            |
|---------------------------------|-------------------------|------------------------------|---------------------------------|-------------------------|-----------------------|
| Standard MCP server integration | pip install correctover | npm install @correctover/sdk | docker pull correctover/gateway | Edge runtime protection | Managed cloud hosting |
